

Aurora™ laser cut diamond peel: A Microdermabrasion evolution

Microdermabrasion skin science is evolving – as is the technology associated with it. Aurora™ is a breakthrough, state of the art Microdermabrasion system. An innovative device, combining the polishing action of laser cut diamond crystals with the cleaning action of a vacuum, Aurora™ transforms standard Microdermabrasion into an effective, controlled procedure conducted on the upper dermis. Even after one treatment, patients experience a significant change in skin texture.

**Aurora™:
Breakthrough Micro-
dermabrasion skin resurfacing.
Smooths skin & enhances
facial glow.**

A durable device with no clogging

Aurora's™ hypoallergenic treatments eliminate the use of loose crystals and other abrasives which cause skin irritation, by replacing them with micro laser cut diamond shaped crystals. As a result, clogging problems are removed and practitioners benefit from a flexible, durable device with a long shelf life.

Let the value shine through

Aurora™ delivers the fastest return on your investment by eliminating the need to purchase expensive crystals. Consequently, it dramatically reduces operating expenses. Doing away with loose crystals has other important benefits: downtime and maintenance are significantly minimized, allowing you to treat more patients and experience far fewer unwelcome surprises.

Laser cut diamond peel: gentle, effective Microdermabrasion

Aurora™ is a breakthrough hypoallergenic treatment that eliminates the use of loose crystals and other abrasives which cause skin irritation, by replacing them with micro laser cut diamond shaped crystals. With diamond Microdermabrasion, practitioners perform a customized exfoliation treatment for each skin area. The topmost epidermal layer is removed by gently abrading the skin with natural micro laser cut diamond shaped crystals. At the same time, dead skin cells are vacuumed away in a sterile and controlled manner.

Aurora™ comes with 9 tips for a wider range of treatments

Aurora™ stands out because of its unique 9 tip option ensuring a wider range of treatments especially for hard to treat areas (e.g. skin surface around the eyes).

Safe and hygienic

By eliminating the use of aluminum oxide crystals, Aurora™ removes the risk of particles remaining embedded in the skin. Treatment rooms remain clean and free of harmful pollutants. After each treatment the tips are soaked in a compact ultrasonic cleaning tub that effectively and thoroughly removes encrusted dirt and grime from even the tiniest, hard to reach corners.

Aurora™: Practitioner Benefits

- Economically efficient:
Lowest cost per peel
- Eliminates messy powdered crystals
- Low maintenance and easy to use
- Choice of 9 tips for a wider range of treatments
- Fully adjustable vacuum
- Safe and hygienic
- Replaceable hand piece parts
- Minimal noise
- Lightweight
